# DEV AGARWAL

**Full Stack Developer**

React.js | Node.js | TypeScript | Express.js | MySQL | AWS
Gurgaon, India | +91-9808310897 | dagarwal499@gmail.com | linkedin.com/in/dev-agarwal-5a0696170

## SUMMARY

Full Stack Developer with **nearly 5 years** of experience building enterprise SaaS for logistics and fintech clients using React.js, TypeScript, Node.js, Express.js, MySQL and AWS. On a logistics platform, built a white-label solution, a versioned Redis pricing cache with parallel carrier pricing, multi-carrier pricing imports and an audit trail framework. On a fintech platform, designed a configuration-driven multi-tenant architecture and configured the existing auto assignment system to work with it. Cut page load time from **over 5 seconds to under 1 second**, uses AI daily for codebase exploration, test case generation and self-review, and owns features from design through production support.

## SKILLS

**Frontend:** React.js, TypeScript, JavaScript (ES6+), Redux, HTML5, CSS3, Responsive Design, Accessibility, Material UI, Ant Design, Bootstrap

**Backend:** Node.js, Express.js, REST APIs, JWT, OAuth, Third-Party API Integration

**Databases & Caching:** MySQL, MSSQL, Redis, Schema Design, Query Optimization, Indexing

**Cloud & DevOps:** AWS (S3), GitLab CI/CD, Git, GitHub

**Architecture:** Multi-Tenancy, White-Labeling, Feature Flags, Caching & Cache Invalidation, Audit Trails, Async Processing, System Design

**Testing & Quality:** Unit Testing, SonarQube, Code Reviews

**Integrations:** Stripe, Nylas, Google APIs, UPS Address Validation API

**AI-Assisted Development:** AI-assisted code review, test case generation, codebase and API exploration

**Practices:** Agile/Scrum, Mentoring, Code Reviews, Production Support

## WORK EXPERIENCE

**AAPNA Infotheek Pvt. Ltd.** New Delhi, India
*Full Stack Developer (Consultant)* Dec 2021 – Present

- Optimized backend performance through MySQL query tuning, strategic indexing and API improvements, reducing response times by **30%**.
- Improved application performance by **45%** through lazy loading, code splitting, debouncing, bundle optimization and React rendering optimizations.
- Wrote unit tests and resolved SonarQube issues by removing duplicate code and fixing security hotspots.
- Use AI tools daily to ramp up on unfamiliar codebases and third-party APIs, generate unit test cases and edge cases, and self-review code before peer review.
- Mentored junior developers and reviewed pull requests to maintain team-wide code quality standards.
- Revamped the UI/UX with responsive layouts, accessibility improvements and clearer navigation.
- Delivered production-ready features in Agile sprints alongside product, design and QA teams.

## PROJECTS

**Deliver Me** *(Logistics Platform)*

- Architected a scalable white-label solution that enabled onboarding of **two** major enterprise clients.
- Enhanced the execution speed of the Freight Pricing Calculator, cutting response time from **8 seconds to 2 seconds** by caching zones, vehicles and rule sets in Redis, loading pricing rules only for the matched lane and service, and pricing all carriers in parallel.
- Built a versioned Redis cache in front of freight rate cards, so rate-card uploads invalidate stale prices immediately and a Redis outage falls back to the database instead of blocking quotes.
- Moved quoting to background processing with live status polling, a per-booking lock that prevents duplicate pricing runs, and change detection that skips repricing when nothing rate-affecting changed.
- Automated multi-carrier pricing imports (Excel to costs, rules, zones, vehicles and surcharges in a single database transaction) for carriers including TSS, Maney, Picup, DSE and General Carrying, so several client rate cards went live in the quote engine the same day.
- Built an Audit Trail framework capturing booking lifecycle events and user activity for traceability.
- Implemented business-critical modules including UPS address validation and a Freight Pricing Calculator.
- Redesigned the booking page with business analysts and stakeholders into a faster, more intuitive UI.

**The Closing Exchange** *(FinTech)*

- Designed a configuration-driven multi-tenant architecture using feature flags and tenant-specific permissions, enabling scalable onboarding of enterprise clients.
- Configured the existing Auto Assignment system (Node.js, MySQL) to work with the multi-tenant architecture.
- Implemented fail-safes and AutoProgress tracking to ensure accuracy and prevent duplicate executions.
- Integrated third-party services including Stripe, Nylas and Google APIs.
- Managed GitLab CI/CD pipelines and deployed releases to AWS lower environments.
- Resolved **200+** complex client requests and production issues, keeping the platform stable.

## CERTIFICATIONS

- React – The Complete Guide (incl. Next.js, Redux) – Udemy
- Complete NodeJS Developer (GraphQL, MongoDB, + more) – Udemy

## AWARDS & RECOGNITION

- Bomb of the Performance Award (Received Twice) – Awarded by two different Vice Presidents for exceptional technical contribution, ownership, and project delivery.
- Rising Star Award – Recognized for outstanding performance, rapid growth, and consistent delivery.
- 1st Runner-Up – Organization-wide Hackathon – Secured second place while competing against top engineering teams across the organization.

## EDUCATION

**SRMS College of Engineering Technology & Research (AKTU)** Bareilly, India
*Bachelor in Computer Engineering* 2016 – 2021
